Evaluated project: https://github.com/m-mato/sem
Name: Erik Macej , 433 744

Checklist evaluation

[OK] – mvn install without problems
[OK] – all tests passed
[OK] – all members of team worked on project
[NOK] – You should use **instance of** instead of **getClass()** in all entities **-1**

Total evaluation:9

Strong points of project
-good entity-relationship model
-properly named attributes in entities
-well documented DAO methods
-complex find methods
-generation methods in tests
-complex tests

Weak points of project
-inconsistent hashCode() and equals() in entities
-your design allows only 1-day long events
-useless testing in getters and setters in Result entity
-inconsistent Annotations in DAO classes (@Transactional in SportDaoImpl)

Things to consider
- I think your code in some cases is inconsistent (etc. Result entity vs all other entities), and you
have useless testing in some classes (again Result entity)
-you have useless teardown methods in test classes
